MAS-QuEChERS

*Quick, Easy, Cheap, Effective, Rugged and Safe*

## — QuEChERS

The QuEChERS (Quick, Easy, Cheap, Effective, Rugged, and Safe) method was first introduced by USFDA and scientists in 2003 and it becomes increasingly popular in the area of multi-residue pesticide analysis in food and agricultural products.

## MAS-Q (QuEChERS)

MAS-Q (Multi-mechanism Adsorption SPE-QuEChERS) is an application of modified QuEChERS method which is suitable for most of the pesticides residue analysis, drug or antibiotic residue analysis in vegetable, fruit, grain, and animal issues.

## Features

- ▲ Single extraction method could be applied to different kinds of sample matrix;
- ▲ High recovery rate for multiple pesticides residue analysis;
- ▲ Universal Clean-up kits are optimized for different application requirement;
- ▲ The method is simple, fast, reproducible and labor-saving.

## Standard Operating Procedure

### • Step 1: Extraction

Weight comminuted sample (10 g or 15 g) into a 50mL centrifuge tube, and then open the extraction kit package, add the salt after adding your solvent to the sample.

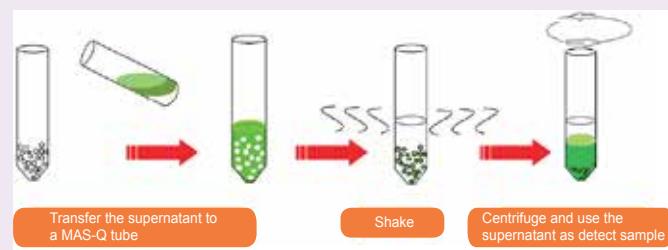

Extraction salts is helpful to extract the pesticides into the organic layer.

Four glass homogeneous balls are suggested to add in to break the  $MgSO_4$  caking caused by sample rich in water.

### • Step 2: Cleanup

Take proper supernatant from step one, and add it into a selected clean up tube which is suited to the food matrix also the method you are following.

2 mL or 15 mL centrifuge tube containing different kind of SPE sorbent and  $MgSO_4$  is available for different sample volume. The sorbent will adsorb the interfering matrix, and the  $MgSO_4$  helps remove excess water.

# MAS-QuEChERS Production Selection Guide

Universal Clean-up kits are optimized for different application requirement:

- ▲ Cleanert® Pesticarb removes the pigments, including chlorophyll and carotenoids.
- ▲ Cleanert® PSA removes organic acid.
- ▲ Cleanert® C18 removes non-polar interferences, such as fats.
- ▲ Anhydrous MgSO<sub>4</sub> removes the excess water.

- The clean up kits are available in 2 mL, 15 mL for different sample volume requirement, and extraction kits are packed in anhydrous sealed packets;
- Superior centrifuge tubes and glass homogeneous ball provide you a simple and convenient experience.

# Workflow

## --- Pesticide Residue Analysis in the Fruits and Vegetables

---

### AOAC 2007.01

15 g homogenize sample + 15 mL 1% HAc ( Acetic Acid) in ACH in 50 mL tube, add internal standard and shake.

Add 6 g Anhydrous MgSO<sub>4</sub> and 1.5 g Anhydrous NaAc, shake vigorously 1 min.

Centrifuge > 1500 RPM 1 min

Transfer supernatant to clean tube with Anhydrous MgSO<sub>4</sub>, PSA, C18 and GCB, shake.

Centrifuge > 1500 RPM 1 min

GC/MS analysis- dilute the extract with methylbenzene;  
LC/MS/MS analysis- dilute the extract with 6.7 mM formic acid.

### EN 15662

10 g homogenize sample + 10 mL MeCH in 50 mL tube, add internal standard and shake.

Add 4 g Anhydrous MgSO<sub>4</sub>, 1 g Anhydrous NaAc, 1 g Sodium Citrate, 0.5 g disodium citrate sesquihydrate, shake vigorously.

Centrifuge > 3000 RPM/min

Transfer supernatant to clean tube with 150 mg Anhydrous MgSO<sub>4</sub>, 25 mg PSA, 2.5 mg or 7.5 mg GCB (remove pigments, optional), shake.

Centrifuge > 3000 U/min

GC/MS or LC/MS/MS analysis- dilute the extract with 5% HAc ( Acetic Acid) in ACH.

# Analysis of Multi-pesticide Residues in Apple using MAS-QuEChERS Kits (AOAC 2007.01)

- Weight 5 g comminuted apple sample into a 50 mL centrifuge tube
- Add 15 mL MeOH with 0.1% HAc into the sample
- Open the MAS-QuEChERS Extraction Kits (P/N: MS-MG5050) and transfer the material into the sample also four glass homogenizers
- Shake by hand for 1 min

↓ Centrifuge 5 min, 8000 r/min

- Take 10 mL supernatant into a 15 mL MAS-QuEChERS Cleanup Tube (P/N: MS-9PA1011)
- Shake by hand for 1 min

↓ Centrifuge 5 min, 8000 r/min

- Take 5 mL supernatant from step two and concentrate it by N<sub>2</sub> evaporator at 40°C , reconstitute the residue with 1mL acetone and then for GC/MS analysis
- Take another 5 mL supernatant and concentrate it by N<sub>2</sub> evaporator at 40°C , reconstitute the residue with 1 mL ACN and then for HPLC analysis.

## Ordering Information

Product Name	Specification	Package	Part No.

# Analysis of Multi-pesticide Residues in Cabbage using MAS-QuEChERS Kits Using LC-MS/MS (EN 15562)

- Weight 10 g comminuted sample in 50 mL centrifuge tube
- Add 10 mL ACN into the sample firstly open the MAS-QuEChERS Extraction Kits (P/N: MS-NMS5050) and transfer the material into the sample also four glass homogenizers
- Shake by hand for 1 min

Centrifuge 5 min, 8000 r/min

- Take out 1 mL supernatant and add it into MAS-QuEChERS cleanup tube (P/N: MS-PA0215)
- Shake by hand for 1 min

Centrifuge 5 min, 8000 r/min

- Take the supernatant then for LC-MS/MS analysis

# Cleanert® NANO

## — A New Material of Carbon Nanotube

Cleanert® NANO was developed base on carbon nanotube material. After Functionalized process, the nano material has better affinity to remove colorants and fatty acids. And the surface deactivation process could control the over-adsorption within limited area, and ensure the recovery of pesticide with a benzene ring structure. The material which has a layer stacked structure could significantly increase the specific surface area and also the loading capacity.

These characteristics allow much less use of the material and improve specificity and selectivity. The amount of material used per sample is about only 1/10 to 1/5 when comparing to traditional PSA, C18 or GCB SPE material.

It could be widely used in the analysis of multiple-pesticide residues in fruit, vegetable and other agro-products. Small amount of the nano material about 10-15mg is enough for most of the sample matrix, and small sorbent bed make it could be packed as a filter format cartridge and show more benefit for fast analysis and small amount of sample analysis requirement.

Structure of the Cleanert® Nano

Syringe Filter Format

### Product Formats

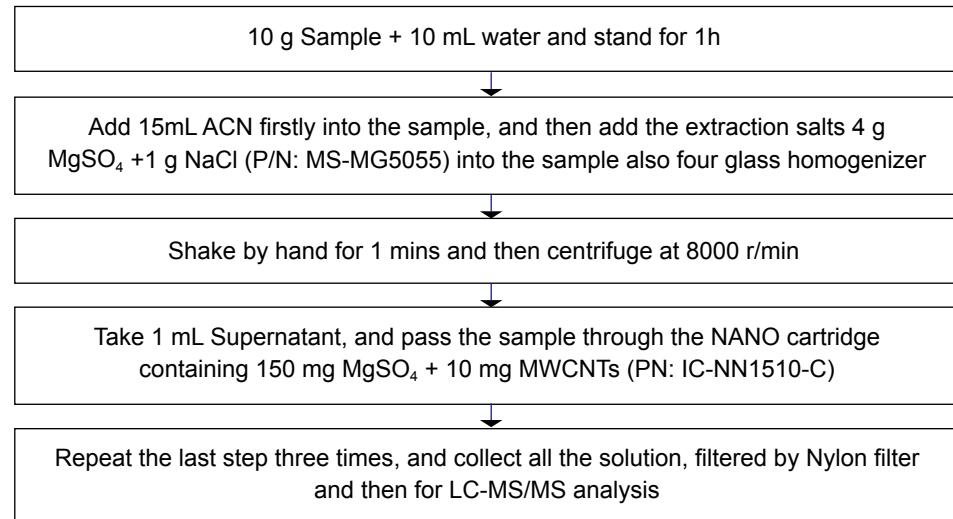

Optimized sorbent was packed into a syringe filter format cartridge and make it could be operated with a simple two-Step operation, conditioning, loading sample and collect the eluent.

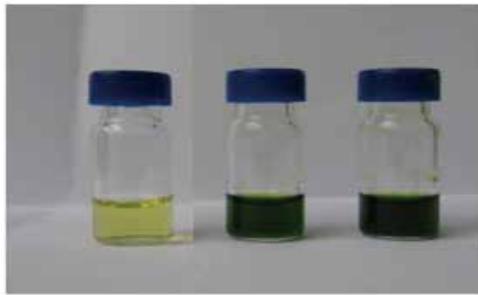

This kind of design make it could be easily compatible with an automated workstation for high throughput requirement.

### Application Note

Detection of 112 kinds of pesticide residue in black tea leaves sample using LC-MS/MS method

### Sample Preparation Procedure

Cleanup performance comparison for leek sample:  
cleanert nano(left), PSA (middle) and before  
cleanup (right)

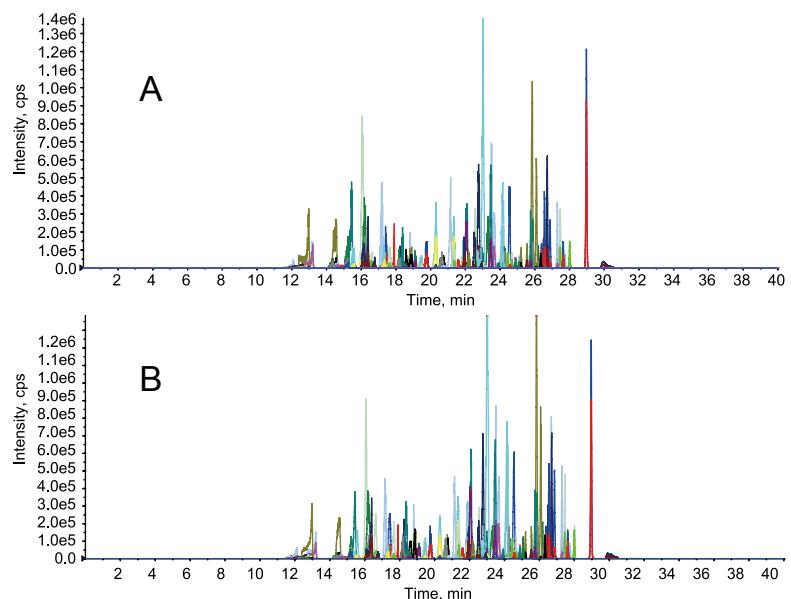

Figure 1. LC-MS/MS chromatogram of tea leaves extract. (A) 114 kinds of pesticides standard solution; (B) tea leaves extract spiked with 0.02 µg/mL 114 kinds of pesticides standard solution.

The recoveries for 114 kinds of pesticides are from 60 to 110%, and the RSD is lower than 10%.
